
What good would having
all your images
on a single platform do?

Agfa HealthCare
Enterprise Imaging

If you no longer had a separate radiology PACS,
separate cardiology PACS, separate VNA, separate viewer...
If all your images, from anywhere, were available to all
involved caregivers across the care continuum,
what differences would you see?

So much more
than a VNA

Converge

Close the gaps separating you from your goals!

Are your imaging systems helping you reach your goals? They should be, but duplicated caches, separate databases, different interfaces and more can slow your image retrieval. What's more, ensuring that everything is integrated and up-to-date can take a lot of your time and effort. With Enterprise Imaging, you have a single platform to align with your vision: every image, everywhere, at every moment. From radiology to cardiology, from ophthalmology to dermatology, it's all there, accessible and manageable.

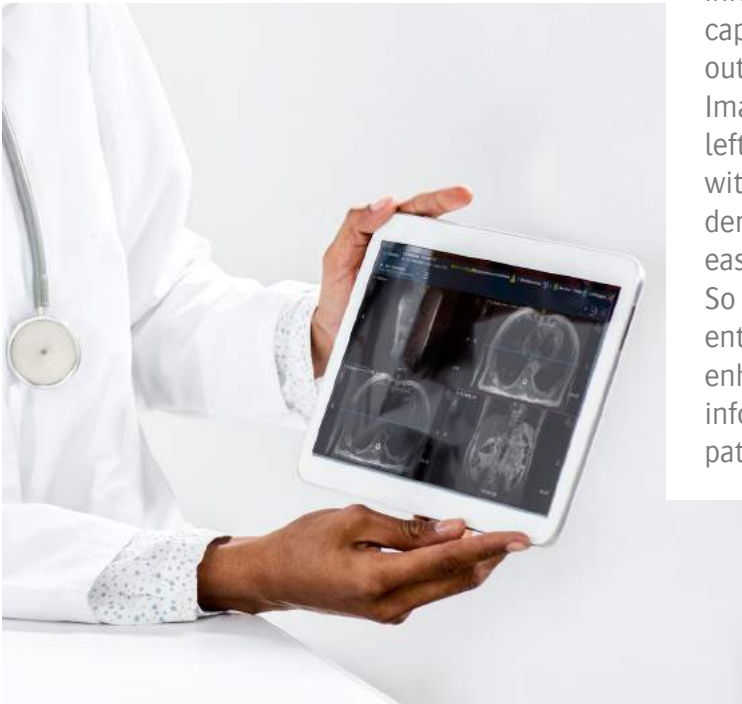

We've brought together departmental PACS, RIS, advanced 3D, voice recognition, VNA, viewer and mobile functionality into a workflow-centric platform that **you can adopt step-by-step, at your own speed.**

Share

Where are your images? Everywhere!

Images don't just come from 'traditional' departments anymore. While radiology, cardiology, etc. remain big image producers, key imaging information is now being captured anywhere, inside and outside the hospital. Enterprise Imaging helps no image to be left behind: the photo taken with a smartphone by the dermatologist is available just as easily as the latest chest X-ray. So you have a true vision of the entire medical imaging record, enhancing your ability to make informed decisions about the patient's care.

Collaborate

The key to patient-centric care

Patient care is no longer about 'encounters' or 'episodes': it now focuses on a holistic, value-driven approach. And this new model requires seamless collaboration all along the care continuum. Enterprise Imaging is dedicated to making that happen. A single platform means less time to find and access images, while the zero footprint Enterprise Imaging XERO Viewer makes those images securely and quickly available on almost any device – desktop or mobile – with just a common browser. Referrals are simplified, diagnosis and reporting are faster, and caregivers can spend time more productively with each patient.

Perform

More meaningful imaging

Healthcare may be about people, but you can't deny the importance of data and information. The growing number of studies (big data) and their increased complexity make management, storage and sharing an ever-greater challenge. Enterprise Imaging helps you put all that information to use, creating added value and saving time.

Care

Empowered patients, satisfied staff

Today's healthcare model involves both caregivers and patients. With easier access and exchange of multi-specialty images, all players in the patient's care are empowered and involved. Getting a second opinion across disciplines becomes as easy as consulting with a colleague in your department. So treatment and turn-around are faster, and exam duplication may be decreased, which not only saves time and money, but also potentially reduce patient dose exposure. With less waiting time for the patient, hospital stays may be shorter. Overall, your staff and patients are more satisfied with the patient care process.

Step into an imaging ecosystem that enhances and speeds up image acquisition and retrieval, optimizes system efficiency and performance, supports your patient care goals, and allows true collaboration across departments, hospitals or regions.

Control

Manage costs today, to meet the needs of the future

You need to be sure your resources are going where they are needed: towards providing quality of care and the best outcomes. Enterprise imaging supports your cost management requirements, by increasing efficiency, reducing duplicate exams, and lowering – even eliminating – the use of imaging-associated consumables. Plus, a consolidated IT infrastructure that optimizes your investments means lower IT costs, all while enhancing the workflow of caregivers.

Comply

Archiving, Value-Based Care and more

New healthcare technologies typically bring new requirements. From requirements on how long imaging data must be archived, to Value-Based Care strategies designed to bring down barriers, to enabling integration with RIS, EMR, EHR, etc., Enterprise Imaging can help support your internal and external image management requirements. And like all of our solutions, Enterprise Imaging is standards-based, adhering to DICOM and HL7 as well as the IHE and XDS/XDS-I Framework.

Your imaging ecosystem

Improving patient outcomes, increasing productivity and enhancing the value of care... These are challenges healthcare facilities like yours are facing all over the world. Imaging has a central role to play in helping you achieve these goals, and **with Enterprise Imaging you are sure that you are getting the most from your imaging data.** By seamlessly creating a comprehensive medical imaging record, and providing you with the tools to collaborate, exchange, view and manage it, Enterprise Imaging supports you **to build a true eco-system** that will bring you clinical value all along the care continuum.

Why Agfa HealthCare

Agfa HealthCare is a global leader in the fast growing market of integrated IT and imaging systems, offering healthcare facilities like yours a seamless flow of information and a 360° view of patient care. We have a unique, holistic approach that enables us to provide in-depth clinical know-how and fully integrated hospital-wide solutions, while our long experience in radiology demonstrate our knowledge in handling images. We have proven our ability to deploy large IT projects around the world and maintain good relationships with leading IT vendors. Not only do we adhere to standards, but we take a leadership role, actively participating in initiatives to build new standards, while using open systems to provide solutions that are customizable to your specific needs. Our Managed and Cloud Services solutions deliver image management, archiving and distribution with total peace of mind.
